

**Look closely
and avoid listeria**

FRIDGE THERMOMETER

Keep food safe

- Put this thermometer on a lower shelf of your fridge (but not in the salad drawers).
- Leave it for at least two hours.
- Check that the centre of the panel has turned bright green and says 'OK'. This means your fridge is at the right temperature - between 0°C and 5°C.
- If the OK panel is still black, turn your fridge thermostat down and check again in another two hours.
