Respondents aged between 25 and 64 years were more likely to have at least a bit of knowledge of the FHRS than those aged 16 to 24 or aged 80 years or over. For example, 65% of those aged 55 to 64 years reported knowledge of the FHRS, compared to 33% of those aged 80 years or over (Figure 2).

Awareness and knowledge of the FHRS also varied between the following groups of people:

- National Statistics Socio-Economic Classification (NS-SEC):** respondents in occupational groups (for example, 60% of those in managerial, administrative, and professional occupations) were more likely to report knowledge of the FHRS than full-time students (42%) and those who were long term unemployed and/or never worked (31%).

Household size: those in households of 3-persons or more (for example, 59% of respondents living in households with 5 or more people) were more likely to report having knowledge of the FHRS compared to those in 1 -person households (47%).

Responsibility for cooking: respondents who were responsible for cooking (57%) were more likely to report knowledge of the FHRS than those who do not cook (33%).

Responsibility for shopping: respondents who were responsible for food shopping (57%) were more likely to report knowledge of the FHRS than those who never shop for food (34%).

Ethnic group: white (57%) respondents were more likely to report knowledge of the FHRS than Asian or Asian British (43%) respondents.
