

# Abbott recalls two infant formula powders because of the possible presence of Salmonella

Abbott has taken the precautionary step of recalling various batches of Elecare Similac and Alimentum Similac infant formula powders because they might contain Salmonella. Both products are foods used for special medical purposes for infants, ordinarily to be used under medical supervision.

## About product recalls and withdrawals

If there is a problem with a food product that means it should not be sold, then it might be 'withdrawn' (taken off the shelves) or 'recalled' (when customers are asked to return the product). The FSA issues Product Withdrawal Information Notices and Product Recall Information Notices to let consumers and local authorities know about problems associated with food. In some cases, a 'Food Alert for Action' is issued. This provides local authorities with details of specific action to be taken on behalf of consumers.
