

‘Don’t take the risk’: The FSA, FSS and UKHSA issue reminder that a range of Kinder egg products and Schoko-Bon’s should not be eaten this Easter weekend

The agencies are continuing to work with Public Health Scotland, Public Health Wales, Public Health Agency Northern Ireland – as well as international public health and food safety authorities – to investigate an ongoing outbreak of Salmonella linked to certain Kinder egg product ranges and Schoko-Bons produced at one of the Ferrero company’s factories, in Arlon, Belgium.

[Full details on the products affected and the recall can be found here.](#)

As of 15 April, there are 70 cases linked to this outbreak in the UK. The majority of the cases are in children under 5 years of age.

Emily Miles, Chief Executive of the Food Standards Agency said:

“As we go into the Easter weekend, we are strongly urging consumers to follow the advice in the latest recall notice and to check any Kinder products they might have already bought against the list detailed in the notice, as they may pose a risk to health. If they do have any products on the list, they should not eat them and should discard them immediately.

“We have emphasised to the business and the authorities in Belgium the importance of taking a precautionary approach to their recall and trust that they will continue to put consumers’ needs first in any action they take.”

Dame Jenny Harries, Chief Executive of the UK Health Security Agency (UKHSA), said:

“We’re reminding people of the recall this Bank Holiday weekend as it’s possible these products have been bought and stored as gifts, or for events such as Easter trails.

“It’s crucial these products are not eaten and are discarded. Salmonella infection can be severe and many children affected in this outbreak have been very unwell and hospitalised, so anyone giving chocolate products to friends or family should take extra care to ensure their Easter gifts are not amongst those products recalled.

“Thank you to parents and guardians who worked with us and other public health authorities in the UK to tell us what their children had eaten prior to becoming unwell – this allowed us to rapidly pinpoint a potential source of infection and helped food chain investigations both in this country and in Europe. We understand this has been a worrying time for these families, and their responses have helped to prevent more children and vulnerable adults being affected.”

Symptoms of salmonellosis – or infection with salmonella - typically resolve themselves within a few days. However, symptoms can be more severe, especially in young children, those who are pregnant and those with weakened immune systems.

Anybody with concerns that they have symptoms of salmonellosis should contact their GP or call NHS 111. Salmonella can be spread from person to person as well as from food, so anyone affected should adhere to good hygiene practices, such as washing hands thoroughly after using the bathroom and avoiding handling food for others where possible, if you have symptoms.

Notes to Editors:

The following products have been recalled and regardless of best-before date, should not be eaten.

The recall includes:

Kinder Surprise 20g & 3x 20g

Kinder Surprise 100g

Kinder Egg Hunt

Kinder Mini Eggs

Kinder Schoko-Bons
